DETAILED ACTION

1. This communication is in response to applicant's 02/17/2004 in the application of Suh et al. for a "Method for calculating hop count of mobile IP in an IP network". This application claims Priority from Provisional Application 60/511,750 filed 10/15/2003 and Claims Priority from Application P2003-9734 filed 02/17/2003 in Republic of Korea.

Election/Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-23 drawn to the Processing of address header for routing, per se: Subject matter having details of techniques or apparatus which process the address information field for switching the packet of information. Wherein information data to be switched is organized with one or more bytes preceded by an identification information indicative of a source or destination station. Classified in **class 370, subclass 392**.
 - II. Claims 24-26 drawn to the Using messages having an address field as header: Subject matter in which information data is organized in one or more bytes preceded by an identifier indicative of source or destination stations. Subject matter wherein information signals are communicated between stations by

assembling or separating the signals via different time periods on a common transmission medium. Classified in **class 370, subclass 349**.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II which has separate utility such as calculating a cost by a regional anchor point (RAP) in an Internet Protocol (IP) network, calculating a hop count using the initial hop limit field value and the hop limit value, which does not include the particular listed of the invention I, such as calculating a cost of a Mobile Node (MN) in an IP network. See MPEP ' 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37.CFR 1.143). Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 2616

application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Man U. Phan whose telephone number is (571) 272-3149. The examiner can normally be reached Monday through Friday from 6:00 am to 3:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jay Patel, can be reached on (571) 272-2988. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (571) 272-2600.

7. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
